

CLASS 7

BIOLOGY PROJECT

TOPIC: HUMAN DENTURE

HOW TO MAKE: Make clay models of the four types of teeth found in human beings (Incisor, Canine, Premolar, Molar) in the specific numbers found in one jaw, i.e. 4 incisors, 2 canines, 4 premolars and 6 molars. [The structures are given in page 68, fig 5.2] Colour them white. Cut out a thermocol piece in a U shape, and insert the models of the teeth there in order, as given in the said figure in your book. **MAKE THE MODEL OF ONE JAW ONLY.**

LAST DATE OF SUBMISSION: November 6, 2014
